

VANTAGE CAR SALES

Car Sales Performance Analysis January – December 2021

Full Analytical Report

Brand Analysis | Geographic Analysis | Market Insights | Strategic Recommendations

Prepared by: Ngene Chigozie

Role: Data Analyst

Report Date: April 2026

1. EXECUTIVE SUMMARY

This report presents a comprehensive analysis of Vantage Car Sales' performance for the fiscal year January to December 2021. A total of 1,491 units of cars were sold across six branch locations in South-West Nigeria. The analysis covers brand performance, model distribution, seasonal trends, branch-level geography, customer demographics, and external economic and population factors.

Key Highlight: 89.3% of all sales (~1,332 units) were generated by just 5 brands — Ford, Toyota, Honda, Nissan, and Hyundai. Total sales grew by 4.27% compared to the previous period.

Metric	Value
Total Units Sold (2021)	1,491
Previous Period Sales	1,430
Growth Rate	4.27%
Number of Active Branches	6
Top 5 Brand Share	89.3%
Top Selling Brand	Ford (368 units)
Top Selling Model	Toyota Corolla (201 units)
Top Branch	Lagos State (361 units)

2. BRAND ANALYSIS

2.1 Sales Volume by Brand

The chart below shows the total number of units sold per brand for the full year 2021. Ford and Toyota lead significantly, together accounting for nearly half of all units sold.

Figure 1: Total Units Sold by Brand (2021)

Insight: The top 5 brands (Ford, Toyota, Honda, Nissan, Hyundai) account for 89.3% of all sales. The bottom 3 brands — Mercedes-Benz (5), Kia (4), and Volkswagen (3) — combined sold just 12 units, less than 1% of total sales.

2.2 Model Variety and Sales Correlation

Fact

There is a clear relationship between the number of models a brand offers and the volume of sales it generates. The table below summarises all key correlations identified in the analysis.

Correlation Factor	Value	Strength
Number of models vs. sales volume	0.92	Strong Positive
Number of months active vs. sales volume	0.88	Strong Positive
Number of branches vs. sales volume	0.85	Strong Positive
Gender diversity vs. sales volume	0.64	Moderate Positive
Avg. buyer age vs. sales volume	Moderate	Moderate Positive

Correlation Factor	Value	Strength
Min. buyer age vs. sales volume	Moderate	Moderate Negative

2.3 Monthly Sales Trends

Fact

The five top-performing brands maintained sales activity throughout all 12 months of 2021. The bottom three brands did not sustain year-round activity. A correlation of 0.88 exists between the number of active months and total annual sales.

Figure 2: Monthly Sales Volume — January to December 2021

Sales grew steadily from 70 units in January to a peak of 200 in November, before a sharp December dip to 61 — likely attributable to seasonal purchasing patterns or end-of-year stock factors.

2.4 Monthly Growth: Current vs. Previous Month

Figure 3: Current Month vs. Previous Month Sales with Growth Rate

The overall growth rate for the year stands at 4.27%, with the strongest month-on-month growth recorded in July (+55.56%) and the sharpest decline in December (-69.50%). June also recorded a decline (-30.77%), suggesting mid-year softness.

2.5 Customer Demographics — Age

Insight

The top five brands attracted buyers across a broad age range (26–48 years). The bottom three brands were patronized only by buyers aged 26–38, missing the high-value 39–48 segment entirely.

Figure 4: Sales Volume by Customer Age Group

The 26–30 age group leads with 480 units, closely followed by 31–35 with 457. The 21–25 age group is the smallest buyer segment at just 15 units, suggesting limited product appeal or accessibility for very young buyers.

2.6 Customer Demographics — Gender

Insight

A moderate correlation of 0.64 exists between gender diversity and sales volume. Brands patronized by both male and female customers consistently outperformed single-gender brands.

Figure 5: Sales Volume by Gender (Female: 766 | Male: 725)

Female buyers (766) slightly outnumber male buyers (725), a near 51/49 split. This near-equal distribution across the top brands confirms that inclusive marketing is a key driver of high sales volumes.

2.7 Brand Recommendations

1. The top 5 brands (Ford, Toyota, Honda, Nissan, Hyundai) should be stocked and sold in ALL branch locations.
2. Each brand should offer a minimum of 3 distinct models per branch to leverage the strong 0.92 model-to-sales correlation.
3. All top brands must be available year-round (all 12 months) — stockouts significantly reduce cumulative sales.
4. Marketing campaigns should target both male and female buyers across all age groups (26–48+).
5. The bottom brands (Mercedes-Benz, Kia, Volkswagen) need campaigns specifically targeting buyers aged 39–48 to tap into a currently underserved segment.

3. GEOGRAPHIC (BRANCH) ANALYSIS

This section analyses the performance of Vantage Car Sales branches across six states in South-West Nigeria, identifying high-performing locations and informing future expansion strategy.

3.1 Objectives

- Analyze the performance across different regions of the branches.
- Identify areas with the highest sales volumes.
- Compare sales performance across branches.
- Understand regional preferences or market trends.

3.2 Sales Volume by Branch

Figure 6: Sales Volume by Branch (State)

Insight: 98.9% of all sales came from 5 branches — Lagos, Osun, Ogun, Oyo, and Ondo. Ekiti State contributed only 17 units (1.1%) and shows signs of severely limited or discontinued operations.

3.3 Monthly Branch Activity

Fact

The top 5 branches recorded sales across all 12 months of 2021. Ekiti State only recorded sales in January, February, and March — the branch appears either inactive or severely under-resourced for the remainder of the year.

3.4 Model Variety by Branch

Insight

A correlation of 0.95 — the strongest in this entire analysis — was found between the number of models available at a branch and that branch's total sales. Top branches each stocked more than 10 distinct car models. Broader inventory directly drives higher unit sales by matching more buyers to appropriate vehicles.

3.5 Top Performing Car Models

The chart below ranks the top models across all branches. The narrow margin between the top 5 models (192–201 units) reflects balanced and broad demand.

Figure 7: Sales Volume by Top Car Models

3.6 Age Demographics by Branch

Insight

While top branches served buyers aged 24–48, Ekiti State's buyer pool was restricted to ages 30–36. This narrow demographic targeting is a likely contributor to Ekiti's significantly lower sales performance.

3.7 Economic & Population Factors

Data Source: Nigeria Bureau of Statistics (IGR, Jan–Mar 2021)

A weak but positive correlation of 0.47 was found between state income levels (IGR) and sales volume, and a correlation of 0.54 between state population and sales. While neither factor dominates independently, together they provide a useful composite index for selecting new branch locations.

3.8 Branch Recommendations

6. Stock the top 5 brands at every branch location at all times.
7. Each branch should offer a minimum of 10 car models to capitalize on the 0.95 model-to-sales correlation.
8. Investigate the Ekiti branch — if operational, restock and relaunch; if inactive, formally reassess resource allocation.
9. New branch locations should prioritize states with higher IGR and population density.
10. Marketing at all branches should target the full age range (24–48+) and both genders.

4. CONSOLIDATED STRATEGIC RECOMMENDATIONS

The following recommendations are drawn from all analytical sections. Each is grounded in correlation analysis and observed sales patterns.

4.1 Brand & Inventory Strategy

- Stock the top 5 brands (Ford, Toyota, Honda, Nissan, Hyundai) in all branches at all times.
- Ensure a minimum of 3 models per brand and 10+ models per branch.
- Maintain year-round stock continuity for all top brands ($r = 0.88$ monthly-sales correlation).

4.2 Marketing Strategy

- Target both male and female customers — gender-diverse patronage correlates with higher sales ($r = 0.64$).
- Expand age targeting to include 39–48 for underperforming brands (Mercedes-Benz, Kia, Volkswagen).
- Review and revamp marketing strategy for bottom-3 brands with dedicated campaigns.

4.3 Branch Operations

- Investigate Ekiti State branch status and take decisive action — reactivation or reallocation.
- Replicate the Lagos/Osun/Ogun branch model: 12-month operations, 10+ models, top-5 brands stocked.

4.4 Expansion Planning

- Prioritize states with higher Internally Generated Revenue and higher population for new branches.
- Use IGR (0.47) and population (0.54) as a composite site-selection index.

5. CONCLUSION

Vantage Car Sales achieved strong performance in 2021 with 1,491 units sold and a 4.27% growth rate. The data reveals a highly concentrated revenue profile — dominated by 5 brands and 5 branches — which is both a strength and a risk. Continued investment in top performers is essential, while actionable steps can be taken to revive underperforming brands and the Ekiti branch.

The strongest strategic lever identified in this analysis is model variety at the branch level ($r = 0.95$). Ensuring diverse and well-stocked inventory across all locations is the single most impactful action available to increase revenue.

The recommendations in this report, if implemented, are projected to improve market reach, increase sales per branch, and position Vantage Car Sales for successful geographic expansion into higher-income, higher-population states.

This report was prepared using 2021 sales data and external economic data from the Nigeria Bureau of Statistics (January–March 2021 IGR).
